

Everything You Wish You Didn't Know About

E Cigarettes

E pens

Vapor Pens

Trippy Sticks

Hookah Pens

E Cigarettes were created to help people kick the smoking habit. You can choose the nicotine strength and wean yourself off slowly.

A Vaporizer works much like E Cigs but allows you to add your own product. The battery powered heating element heats to 365-410 degrees, just over THC's boiling point--releasing the THC through the inhaled vapor. No burning, smoking smell.

An e-cigarette is shown vertically in the center of the image. It has a black body with a silver-colored band near the bottom. A bright blue vapor is being emitted from the mouthpiece, swirling upwards and outwards. The background is solid black.

**TEENS
SECRETLY
USING E-CIGS
TO SMOKE
MARIJUANA?**

**The vapor is inhaled
and not easily detected.
Teens have admitted to
smoking in the same
room as their parents,
in classrooms,
bathrooms, movie
theaters, almost
anywhere undetected.**

Schools

HOW IT WORKS

Vape pens are either fed dry,
finely ground marijuana or,
similar to e-cigarettes,
concentrated oils and waxes.

E-cigarettes, Hookah pens, Epens

Flavored Oils are Often Used

Some are disposable
