

## WELCOME

 Math 2Chapter 5/6: Triangle Congruency Theorems
Last Night's HW: None
Tonight's HW: 5.1 Worksheet

## Warm Up

Find the missing sides in the special right triangles:
1.

2.

16

## Chapter 5-6 Learning Targets

Math 2 Chapter 5-6: Triangle Congruence Theorems

|  | Learning Target | Test | Iknow <br> it | I partially <br> get it | Idon't <br> get it |
| :--- | :--- | :--- | :--- | :--- | :--- |
| A | I can state postulates or theorems that can be used to prove two <br> triangles are congruent. | 5.2 |  |  |  |
| B | I can prove that two triangles are congruent using the Side-Side-Side <br> congruence theorem. | 5.3 |  |  |  |
| C | I can prove that two triangles are congruent using the Side-Angle-Side <br> congruence theorem. | 5.4 |  |  |  |
| D | I can prove that two triangles are congruent using the Angle-Side- <br> Angle congruence theorem. | 5.5 |  |  |  |
| E | I can prove that two triangles are congruent using the Angle-Angle- <br> Side congruence theorem. | 5.6 |  |  |  |
| F | I can use right triangle congruence theorems to prove right triangles <br> are congruent (HL). | 6.1 |  |  |  |
| G | I can use corresponding parts of congruent triangles (CPCTC) to prove <br> angles and segments are congruent. | 6.2 |  |  |  |
| H | I can solve problems using the Isosceles Triangle Base Theorem and its <br> converse. | 6.2 |  |  |  |
| I | I can write the inverse and contrapositive of a conditional statement. | 6.4 |  |  |  |
| J | I can perform basic transformations on the coordinate plane | 5.1 |  |  |  |

## Chapter 5 Section 1 Learning target

J I can perform basic transformations on the coordinate plane 5.1

## Transformation Basics Review

Figures in a plane can be reflected, rotated, or translated to produce new figures.

Preimage:
The original version of the figure be transformed

## Image:

The new version of the figure being transformed

## Transformation:

The operation that maps, or moves, the preimage onto the image

## Image Notation

Use the symbol from the previous image and add a prime symbol

"The preimage " $A$ " maps to the Image " $A$ " Prime"

## Translation

The mapping of a figure from one location onto another location while keeping the orientation.

"The preimage is transported onto the Image"
2) translation: 4 units right and 1 unit down

## Reflection

A transformation that uses a line like a mirror in order to reflect a figure to the opposite side

The line $m$ is the "Line of Reflection"

## Requirements For Reflections

1. Points are reflected equal distance from line of reflection

2. Reflected perpendicular to line of reflection.

3. If $\mathbf{P}$ is on line then stays on line

4) reflection across the $x$-axis

## Reflect across the line $y=x$

## Rotation

A transformation that rotates a figure around a fixed point

-The point $\mathcal{L}$ is called the "Center of Rotation"
-Rays extended from $\mathcal{L}$ give the "Degree of Rotation"

## Requirements For Rotation

1.Points stay equal distance from the center of rotation

2. All points move in the same direction and amount.

3. If point $Q$ is on center then stays

1) rotation $90^{\circ}$ counterclockwise about the origin

## Rotation Direction

Clockwise rotation of $60^{\circ}$
Clockwise: The figure travels in the same direction of the hands on a clock

Counterclockwise rotation of $40^{\circ}$
Counter Clockwise: The figure travels the opposite direction of the hands on a clock
